

## Worksheet: Strengths & Direction Map

Name: \_\_\_\_ Date: \_\_\_\_

Use your Lesson 1 audit notes to complete this worksheet. Be honest — a smaller, true picture is more useful than an impressive-sounding false one.

### Part 1: Project Inventory

List every project you can think of — Lumexa missions, personal projects, and times you helped someone else. Include unfinished or informal ones. Add rows as needed.

| Project Name | What It Demonstrates (be specific) | Confidence Level (High / Medium / Low) |
|--------------|------------------------------------|----------------------------------------|
|              |                                    |                                        |
|              |                                    |                                        |
|              |                                    |                                        |
|              |                                    |                                        |
|              |                                    |                                        |
|              |                                    |                                        |

### Part 2: Strengths Clustering

Look at your table above. Group any projects that show the **same underlying skill**, even if they used different tools. A cluster needs **two or more** projects at Medium or High confidence to count as a real strength.

**Example (Fictional — Jordan R.):**

Cluster: *Visual layout & styling* Projects: Space Weather Dashboard (Lumexa), Personal Portfolio Starter Page (Lumexa), Birthday invitation redesign (personal), Group CSS debugging help  
Why it's a real cluster: same skill shows up 4 times, across school missions and personal work, including outside positive feedback.

**Your clusters:**

**Cluster 1:** - Skill: \_\_\_\_\_ - Projects that support it: \_\_\_\_\_ - *Why this counts as a real cluster (not a one-off):* \_\_\_\_\_

**Cluster 2 (optional):** - Skill: \_\_\_\_\_ - Projects that support it: \_\_\_\_\_ - *Why this counts as a real cluster (not a one-off):* \_\_\_\_\_

### Part 3: My Direction for This Portfolio

Use this template to write your direction statement. Keep it to 1–2 honest sentences you can back up with your inventory above.

Template:

My portfolio direction is **[focus area]**, because my projects show a repeated pattern of **[specific skill]** across **[number]** projects, including **[strongest piece of evidence]**.

Example (Fictional — Jordan R.):

My portfolio direction is **front-end web development and visual design**, because my projects show a repeated pattern of **layout, styling, and visual polish** across **four** projects, including my **Personal Portfolio Starter Page**, which got positive feedback from my instructor and is deployed live on Vercel.

Your direction statement:

My portfolio direction is \_\_\_\_\_, because my projects show a repeated pattern of \_\_\_\_\_ across \_\_\_\_\_ projects, including \_\_\_\_\_.

### Part 4: What I Still Want to Learn

List genuine interests you have that aren't backed by enough evidence yet to be part of your direction. These aren't deleted — they're what you might build toward next.

Example (Fictional — Jordan R.):

- Game development — I have one finished platformer, but it's my only game project and the jump mechanic still has bugs. I want to build 2–3 more before I'd call this a strength.
- Data visualization — haven't tried it yet, but it looks interesting after seeing it in a Lumexa mission preview.

Yours:

1.

2.

3.

*Keep this worksheet — you'll use your Part 3 direction statement directly at the start of Lesson 3.*
