

Worksheet: Bio Draft + Project Case Study Template

Fill in every blank with real, honest information about yourself and one real project you've completed. If a section doesn't fully apply, write the honest truth (e.g., "still in progress") rather than leaving it blank or making something up.

Part 1: Professional Bio Draft

Reminder — the four parts of a bio: **who you are / what you build / what you're working toward / one proof point.**

Version A — One Sentence

I'm _ [name], a _ [student/grade, optional] who builds _ [type of thing you build].

Example (Jordan R.):

I'm Jordan, a high school student who builds small web tools.

Your version:

I'm _____.

Version B — Two to Three Sentences

I'm _ [name], a _ [student/grade, optional] who builds _ [type of thing you build]. My latest project is _ [project name + one-line description]. Right now I'm working on/learning _ [current goal or skill].

Example (Jordan R.):

I'm Jordan, a high school student who builds small web tools — mostly HTML/CSS sites and simple JavaScript apps. My latest project is a habit tracker that saves data in the browser so it remembers your streaks. Right now I'm learning how to connect my sites to real APIs.

Your version:

Version C — Full Paragraph

I'm _ [name], a _ [student/grade, optional] who builds _ [type of thing you build — be specific about tools/languages]. My latest project is _ [project name + what it does + one honest detail about how it works or what's still incomplete]. Right now I'm working on/learning _ [current goal or skill], because _ [real reason]. You can see my work at _ [portfolio link or "link coming soon"].

Example (Jordan R.):

I'm Jordan, a high school student who builds small web tools — mostly HTML/CSS sites and simple JavaScript apps. My latest project is a habit tracker that saves data in the browser so it remembers your streaks. Right now I'm learning how to connect my sites to real APIs, because I want my next project to pull in real, live information instead of just storing what a user types. You can see my work at jordanbuilds.dev.

Your version:

Buzzword check: Circle any word in your draft that could describe literally any student ("passionate," "hardworking," "team player," "creative," "amazing"). For each one, either delete it or replace it with a specific fact.

Part 2: Project Case Study Template

Pick ONE real, completed project (Lumexa or personal). Fill in every row honestly — a modest or partial result is a completely valid answer.

Section	Prompt	Your Answer
Project Name	What is it called? One line on what it is.	
Problem / Goal	What need, question, or goal started this project?	
Tools Used	What languages, platforms, or tools did you actually use?	

Section	Prompt	Your Answer
My Approach	What did you actually do, in order? What decisions did you make?	
Result	What actually happened? Does it fully work, partly work, or not yet — be specific.	
What I Learned	What's one real thing you know now that you didn't before this project?	
Link / Screenshot	<i>(Placeholder note: paste your live link here, or attach a screenshot image if the project isn't hosted online yet. Do not leave this section blank — write "screenshot attached below" or "link: [url]" or "not yet hosted — see code file attached.")</i>	

Filled Example — Jordan R.

Section	Jordan's Answer
Project Name	Habit Tracker — a browser-based app for logging a daily habit and seeing a streak count.
Problem / Goal	I wanted a simple way to track drinking water daily, but wanted to build my own instead of using an existing app, so I could understand the logic myself.
Tools Used	HTML, CSS, JavaScript (localStorage).
My Approach	Built the layout in HTML/CSS first. Used JavaScript to save each day's entry in the browser's localStorage so the data survives a page refresh. Added a function that checks for consecutive days logged and displays a streak count.
Result	It works — data saves correctly and the streak count updates properly. It only works on one browser/device right now; it doesn't sync across devices, which I know is a limitation.
What I Learned	I learned how localStorage works and why it's fine for a single-device app but not enough for something that needs to sync — that would need a real backend and database, which I want to learn next.

Before you submit: read both your bio and your case study out loud. Cross out any sentence that sounds like it was copied from a generic template. Replace it with something only you could honestly say about your own work.
