

Worksheet: Project Selection & Proof Rubric

Name: ____ Date: ____

Part 1 — Score Your Candidate Projects

List every project you could include — Lumexa class projects, personal projects, school assignments, group projects. Score honestly.

- **Complexity (1–5):** How many real technical decisions did this require? (1 = trivial/copied template, 5 = many deliberate design/technical choices)
- **Completeness (1–5):** Does it work end-to-end and can it be shown or shared right now? (1 = unfinished/broken, 5 = fully working and shareable)
- **What it proves:** One sentence — the specific skill or trait this project demonstrates.
- **Include? (Yes/No):** Your decision for the final portfolio.

Project Name	Complexity (1–5)	Completeness (1–5)	What It Proves	Include? (Y/N)

Your final 2–3 featured projects: 1. ____ 2. ____ 3. ____ (optional)

Filled Example — Jordan R. (fictional student)

Project Name	Complexity (1–5)	Completeness (1–5)	What It Proves	Include? (Y/N)
Chore Tracker App	4	5	Can design a full-stack tool that solves a real household problem and ship it end-to-end	Y
Class Trivia Game (Lumexa)	3	5	Can build and finish an interactive project under a course deadline	Y
Personal Blog Redesign	2	5	Comfortable with clean HTML/CSS and responsive layout, but limited technical depth	N
AI Chatbot Experiment	5	2	Ambitious idea (tried integrating an API for natural responses) but never got past a broken prototype	N

Project Name	Complexity (1–5)	Completeness (1–5)	What It Proves	Include? (Y/N)
Group Science Fair Website	3	4	Can collaborate on a shared codebase and take ownership of a specific piece (the data visualization page)	Y

Jordan's reasoning: The Chore Tracker and Class Trivia Game are both high on complexity and completeness — clear proof of finished, technical work. The Group Science Fair Website scores a bit lower but proves something the other two don't: collaboration and a specific, honestly-described role on a team, so it's worth the third slot. The Blog Redesign is solid but doesn't add a new skill beyond what the other three already show. The AI Chatbot is the most ambitious idea but isn't finished enough to be shown — it's left out for now, though Jordan notes it as a project to finish later.

Part 2 — Case Study Template (Project #2)

Project Name:

Problem/Goal: (What real problem or need started this project?)

Tools Used:

My Approach: (What specific decisions did you make, and why?)

Result: (What actually happened — be specific and honest.)

What I Learned:

Part 3 — Case Study Template (Project #3)

Project Name:

Problem/Goal: (What real problem or need started this project?)

Tools Used:

My Approach: (What specific decisions did you make, and why?)

Result: (What actually happened — be specific and honest.)

What I Learned:

Final Check Before Submitting

- ☐ I scored at least 4 candidate projects honestly (not all 5s).

- ☐ My final 2–3 projects are the ones that score well AND together prove different skills, not the same skill three times.
- ☐ Both new case studies name a specific tool, decision, or number — not just general statements.
- ☐ Both new case studies are fully honest about my role and the real outcome.
- ☐ I compared the tone/voice of my new case studies to my Lesson 5 brand kit and my Lesson 4 case study.
