

Client Simulation — Reflection Worksheet

Name: ____

1. What was the hardest part of this simulation — discovery, proposing, delivering, or handling feedback? Why?
2. Describe one moment where you had to adjust your plan based on new information.
3. How did you decide the revision request wasn't scope creep? What would have made it scope creep instead?
4. What would you do differently with a real client, based on this practice?
5. Could this simulated project (or a similar real one) become a new Course 16 portfolio case study? What would you need to add to make it a strong case study entry?

Filled Example — Fictional "Jordan R."

1. "Discovery was hardest — I wanted to jump straight to building instead of asking enough questions first."
2. "Priya mentioned she's not technical, so I had to add simple update instructions I hadn't originally planned for."
3. "Moving a section is a layout change to something already scoped. Adding a whole new feature, like a login system, would have needed a new proposal and price."
4. "I'd ask more questions up front about who else might edit the site, not just Priya."
5. "Yes — I'd add it as a case study showing a full client engagement, from discovery through handoff, which is different from my Course 16 personal-skill case studies."
