

Revision Request — Handling Instructions

The `Client_Feedback.md` message contains one concrete revision request: **move the Events section higher on the page, right after the intro.**

Is this scope creep or a reasonable revision?

This is a **reasonable revision** — it's a layout/ordering change within the same page and feature set already scoped, not a new feature. Students should be able to explain why (in their documentation) this is different from, say, "actually, can you also build us a members login system" (which WOULD be scope creep, requiring a new proposal/price).

Student Task

1. Make the change (reorder the sections).
2. Write a 2–3 sentence note documenting what changed and why it stayed within scope.
3. Reply to the client with a short, professional message confirming the change is done.

Filled Example — Fictional "Jordan R."

"Moved the Events section to appear directly after the intro, per your feedback — since this is a layout adjustment to already-scoped content rather than a new feature, it doesn't change the original price or timeline."

Reply to Priya: "Hi Priya — done! Events now show right after the intro, exactly as you described. Let me know if you'd like anything else adjusted before we finalize."
