

Lumexa — Digital Independence Path

Course 18, Lesson 2 — Profile Builder Worksheet

Name: ____ Path (circle one): **LinkedIn** / **Portfolio-First**

Instructions: Fill in your column only (LinkedIn or Portfolio-First). Draft here first — do not publish or save live until your instructor reviews this worksheet.

1. Headline Draft

Formula: [What you do / are learning] + [specific tool, skill, or focus area] + [what you're curious about or working toward]

	LinkedIn Path	Portfolio-First Path
My headline draft	_____	_____
Does it name a specific skill/tool? (Y/N)		
Does it avoid just stating a job title or grade level? (Y/N)		

2. About-Section Draft (4 Parts)

Part	LinkedIn Path	Portfolio-First Path
1. Who you are (1–2 sentences)	_____	_____
2. What you can actually do (2–3 sentences, real & specific)	_____	_____
3. What you're curious about / working toward	_____	_____
4. How to connect / what you're open to	_____	_____

3. Experience / Education Entry (LinkedIn) or Project/Experience Card (Portfolio)

	LinkedIn Path	Portfolio-First Path
Title/Role (must be accurate — no invented positions)	_____	_____

	LinkedIn Path	Portfolio-First Path
Where (school, community org, self-directed, etc.)	_____	_____
What you actually did (1–2 sentences, real)	_____	_____

4. Consistency Check Against Your Course 16 Bio/Brand Statement

Pull up your Course 16 bio or brand statement and compare.

Question	Your Answer
Does today's About section match the tone of your Course 16 brand statement? (Y/N)	
Does today's About section match the focus area/direction from Course 16? (Y/N)	
If you answered "N" to either: which version is more accurate — the old one or today's? What needs to change?	_____

5. Truth Check (Complete Before Instructor Review)

- ☐ Every skill I claimed, I could demonstrate live right now if asked.
- ☐ I did not invent any job title, employer, or years of experience.
- ☐ My headline names something specific, not just my age/grade/title.
- ☐ My About section follows all 4 parts.
- ☐ Instructor has reviewed this worksheet. Reviewer initials: _____

Filled Example — Jordan R. (LinkedIn Path, age 17)

Headline:

Aspiring data analyst learning Python and spreadsheet modeling — currently exploring how data can tell a clearer story through visualization.

About section: 1. *Who you are:* I'm a high school junior interested in how data shapes decisions, from sports stats to school budgets. 2. *What you can actually do:* I've built a Python script that cleans and summarizes CSV data, and I created a dashboard in Course 14 that tracked my school's recycling program over one semester. I'm comfortable with basic Python, spreadsheet formulas, and simple chart design. 3. *What you're curious about:* I want to get better at telling a story with data, not just displaying numbers — I'm currently learning more about chart design and what makes a visualization easy to read at a glance. 4. *How to connect:* Open to connecting with other students interested in data, and happy to share my recycling-tracker project with anyone curious.

Experience entry:

Student Data Project Lead — Lumexa Course 14 Capstone Designed and built a semester-long dashboard tracking school recycling data; presented findings to a small student group.

Consistency check: Matches Course 16 brand statement, which described Jordan as "curious about numbers and patterns." No changes needed.

Filled Example — Alex T. (Portfolio-First Path, age 15)

Headline:

Aspiring game developer building small projects in Scratch and beginner JavaScript — currently exploring how simple game mechanics are built from scratch.

About section: 1. *Who you are:* I'm a 9th grader who's been building small games and interactive projects for about a year. 2. *What you can actually do:* I built a maze game in Scratch with three levels and a scoring system, and I'm currently working through my first JavaScript project — a simple quiz app — as part of Lumexa's coursework. I'm comfortable with Scratch's full logic system and am learning JavaScript fundamentals. 3. *What you're curious about:* I want to understand how physics and movement work in games — right now I'm exploring how collision detection works under the hood. 4. *How to connect:* Check out my maze game and quiz app in the project gallery below, or reach out through the contact form on this site.

Project/Experience card:

Independent Project — Maze Game (Scratch) Designed and built a 3-level maze game with a scoring system as a self-directed project; refined game logic based on feedback from classmates who play-tested it.

Consistency check: Course 16 brand statement described Alex as "hands-on and curious about how things work." The About section above matches that tone directly — no changes needed. Header graphic for the presence page created in Canva, using the same color palette as the rest of the portfolio site for visual consistency.
